Produse periculoase

Reagent set ultra low range hardness determination by the Chlorophosphonazo method. Hach Method 8374. Range: 4 - 1000 ug/L Ca & Mg as CaCO3. Chlorophosphonazo reagent solution is packaged in a 500-mL bottle that is ideal for use with Hach's Pour-Thru Cell. Approximately 250 tests

Convenience
Rapid Liquid methods utilize liquid reagents, bottletop dispensers and pour-thru cells to provide simplified testing.

Performance
Since the pour-thru cell provides a stationary optical system, Rapid Liquid methods typically provide better precision than methods that require movement of sample cells.

Efficiency
Rapid Liquid methods are ideal for high-volume testing.

Specificații

Caracteristici speciale:	Reagent set, ULR, Bulk
Domeniu de măsurare:	4 - 1000 µg/L $CaCO_3$
Instrument:	All except DR 900, PC II
Numar metoda:	8374
Numar teste:	250
Nume metoda:	Chlorophosphonazo
Parametru:	Hardness
Platforma:	Solu#ie
